JRM, Inc. was founded by James R. Merritt, a former golf course superintendent who grew frustrated with the poor craftsmanship of aeration tines and bedknives. In the early 90s, aerating a golf course required replacing tines 5-6 times. Jim approached Toro® to develop a tine that could last an entire aeration, but they said it couldn't be done. Determined to find a solution, Jim began making tines in his garage, and in 1997, he introduced JRM's DILLENNIUM® carbide tip tines. These tines could aerate 18 greens—including practice areas—on a single set, revolutionizing the turfgrass maintenance industry. Today, with over 30 years of innovation, JRM is known for producing the highest-quality products trusted by superintendents worldwide.

James. R & Jenni Merritt
JRM, Inc. President/CEO

*With God's help we can accomplish great things;
without OUR help, HE will do nothing.*

DURANIUM-801® Greensmower and Fairway Bedknives

The most durable bedknives in the market, manufactured entirely by JRM to ensure quality and precision. JRM has perfected several proprietary processes to create bedknives which hold a sharp edge longer, even in challenging soil and turf conditions, such as those with heavy sand top-dressing.

INFINITY® DURANIUM-24 Reels

JRM's fairway and greensmower reels are designed to maintain a sharp edge while being tough enough to handle impacts. The improved heat-treat process increases durability, setting JRM's reels apart in the industry.

INFINITY® Tines

Made from JRM's patented steel, INFINITY® tines are heat-treated to be up to 40% harder than standard steel tines. These tines deliver consistent performance, guaranteeing the same diameter and hole length from the first green to the 18th. Many users can aerate over 36 greens plus tee boxes with just one set.

INFINITY® Emperor Tines™

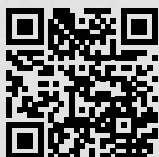

Engineered to remove the smallest cores with minimal disruption to gameplay, Emperor Tines™ effectively remove the top layer of thatch and improve water filtration on golf greens. When used correctly, a single set can aerate 36 to 48 greens, offering incredible durability and efficiency.

JRM Deburring Stone

JRM DURANIUM-801® bedknives are renowned for being ready to cut right out of the box. After aligning the bedknives to the bed bar, the JRM deburring stone comes into play. By coating the bed bar with WD-40® and hand-stoning the surface for about 30 seconds, you can remove high spots and dings, ensuring the flattest surface. This minimizes the need for grinding, extending the life of the bedknife.

JRM Vulcan Grinding Wheelz

The Vulcan Grinding Wheelz are compatible with all Foley®, Peerless® and Bernhard Anglemaster® bedknife grinders. Made from Cubic Boron Nitride (CBN), the second hardest abrasive next to diamond, these wheels are ideal for grinding harder steels like bedknives. CBN wheels provide a cooler grind, reducing the risk of thermal damage. The Vulcan Wheel can cut a Maintenance Tech's time grinding by half compared to standard Aluminum Oxide wheels.

The New JRM Stimp Brush™ a huge advancement in 'Pre-Clip Conditioning'

In celebration of the 100th anniversary of the GCSAA, JRM, Inc. will introduce a true game changer to the golf course industry at the 2026 Conference in Orlando.

Demos are available, please reach out to your local JRM representative.

'Pre-Clip Conditioning'

Faster, Smoother and Truer Ball Roll

Stimp Brush™ Benefits:

- 01 **Speed & Cut Quality**
 - Boosts green speed at higher HOC.
 - Truer, cleaner cut.
 - Eliminates groomer marks.
 - Consistent height-of-cut.
- 02 **Turf Health & Canopy**
 - Clears old clippings.
 - Increases light penetration.
 - Improves spray efficacy.
 - Improves nesting of top-dressing materials.
- 03 **Customization & Durability**
 - Maximum lifespan, non-corrosive.
 - Soft and Firm brush models for all turf types.
- 04 **Maintenance Efficiency**
 - Quickly adjusts height.
 - Tool-less brush removal.
 - Extends reel life.

"I have four John Deere® 7700 fairway mowers. Last year, I rebuilt all 20 of the cutting units with JRM reels and bearing kits. The quality of the JRM products is second to none. The JRM reels and knives retain their edge well. This winter, I plan on rebuilding the cutting units on three John Deere® triplex greensmowers and 11 John Deere® walking greensmowers."

Ray Jaramillo,

Equipment Manager
at Diablo Country
Club in Diablo Ca.

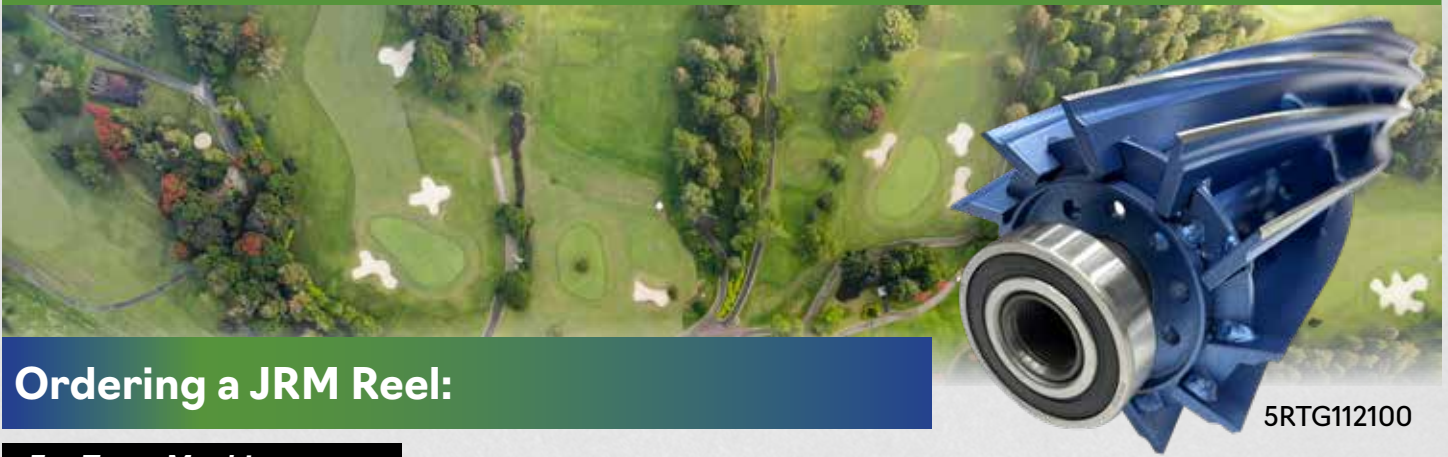

JRM INFINITY® DURANIUM-24 REELS

Created with strengthened welds & blade profile including pre-ground relief. Balanced at the highest standard.

Made with DURANIUM-24 steel
and *YOU* in mind.

JRM INC
INNOVATIVE TURF TECHNOLOGY

JRM INFINITY® DURANIUM-24 REELS

Ordering a JRM Reel:

5RTG112100

For Toro® Machines:

Very important to verify the 5-digit cutting unit model number that is stamped on all Toro® cutting units. You can cross reference the cutting unit model numbers on Page 11 of the 2026 JRM parts catalog.

For John Deere® Machines:

All JRM reels are made for the Quick Adjust (QA5 and QA7) cutting units. Most John Deere® cutting units come with the "QA" units no matter the age of the mower. The Quick Adjust reels are designed to easily adjust the bedknife to reel contact on each cutting unit.

For Jacobsen® Machines:

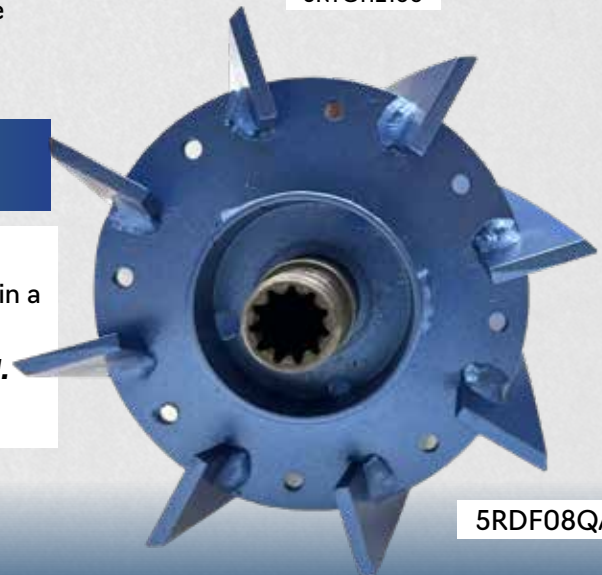

Simply verify the OEM part number to select the correct reel. Currently, JRM only carries 22" reels for Jacobsen®. We are researching 18" and 26" options for Jacobsen®.

5RTG112100

What makes a JRM INFINITY® DURANIUM-24 reel stand out from the competition?

- JRM reel blades are **made with a unique non-standard high-carbon, high-alloy steel** that is designed to maintain a sharp edge longer than the competition.
- JRM reels are balanced to **tighter tolerances than OEM.**
- Welds are strengthened for **longer reel life.**

5RDF08QA7

"JRM REELS are great quality and even better performance. They hold an edge better and longer than the OEM and I would recommend JRM's for your next replacement reel."

Isaac Keziah, Eagle Chase
GC, Marshville, NC.

JRM'S SMOOTH & TRUE LOW PROFILE DURANIUM-801® BEDKNIFE

JRM'S NEWEST CREATION PROVIDES UNMATCHED LOW-CUT PERFORMANCE WITH SUPERIOR AFTER-CUT APPEARANCE.

- Made to fit standard 22" bed bars for Toro®, Jacobsen® and John Deere® greensmowers
- Designed the same as JRM's top selling "Ultra-Cut" max drag clearance bedknife
- Perfectly suited for all turf grasses including Paspalum, Bermuda, Bent, and Poa Annua
- The Smooth and True bedknife allows for extremely low mowing performance approaching .080"
- JRM manufactures all bedknives at its Winston-Salem, NC facility to control quality, performance and consistency

JRM DURANIUM-801® Bedknife Info

Steps to tighten a JRM bedknife

Step 1: Using a torque wrench and bedknife socket driver tool, tighten the two outermost screws to 10 in-lbs (1 N-m)

Step 2: Working from the center of the bedknife towards each end, tighten the screws according to your mower's recommended tolerance below in an alternating (side to side) sequence (see diagram). Anti-Seize Lubricant is recommended to be put on the screw threads before installation.

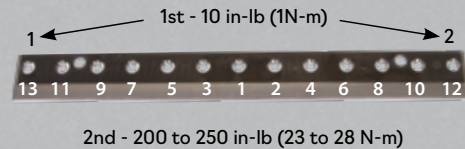

Recommended factory tolerances

Toro® - 200 to 250 inch-lbs. (22.6-28.3 N-m)

Jacobsen® - 90 to 120 inch-lbs. (10.2-13.5 N-m)

John Deere® - 62 inch-lbs. (7 N-m)

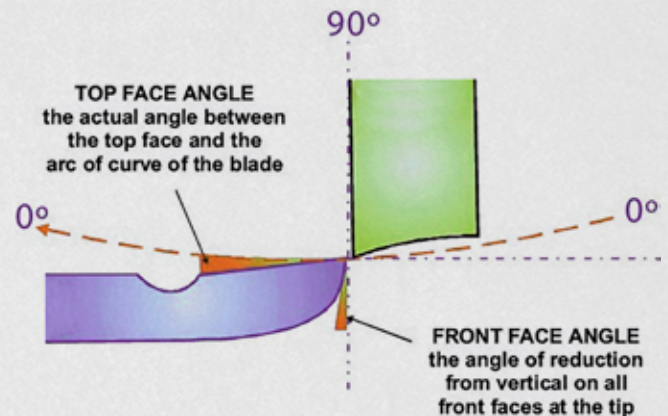

N-m = Newton Metre

Bedknife Grind Angles

The top-face and front-face angles listed in the book for DURANIUM-801® bedknives are present on the bedknives out of the box. The bedknives will cut at those specs, but maintenance technicians can adjust those angles according to their preferences and needs without losing life on the bedknife.

The top-face angle combines with the front-face angle to create the actual cut point, and it provides clearance for the clippings to eject after a blade of grass has been cut. The top-face angle can also be used to adjust your bedknife to reel contact. The front-face angle is important for allowing the reel to present the grass to the bedknife to be cut.

JRM DURANIUM-801® Bedknives: A cut above the rest!

- DURANIUM-801® bedknives are the most durable bedknife on the market.
- JRM bedknives are designed to hold an edge longer, cut paper longer and grind less.
- DURANIUM-801® steel is perfectly suited to the different golf course grasses and holds an edge longer in all conditions, including top-dressing.
- Consistency: All JRM bedknives are QC inspected within a .004" margin creating straightness from edge to edge to minimize any pre-grinding set up.
- DURANIUM-801® bedknives are ready to cut grass out of the box at the grind angles listed in the catalog.
- Highest carbon content on the market.
- High manganese content and high boron for bonding.

Coining! A Patented Process

- Flatter Knife
- Truer to bedbar
- Less reel wear
- Less "pre-use" preparation
- Doesn't interfere with molecular realignment for added strength
- Compresses metal, instead of cutting metal away, creating a stronger bedknife

It is extremely important that you use JRM screws with all of our bedknives. OEM screws could affect our tolerances and overall bedknife performance.

SELECTING THE CORRECT GREENSMOWER BEDKNIFE:

JRM Standard Bedknives

A standard bedknife is recommended for courses with no scalping, bruising and/or scuffing issues. Select according to your desired cutting height.

These bedknives will not cut lower than the minimum cutting-edge height listed.

Standard low-cut: .135" & above
Tournament-cut: .115" & above
Micro-cut/Super Tournament: .098" & above
High-cut: .175" & above

Smooth and True low-profile bedknives

- Cuts as low as .080" & above.
- Designed similar to a JRM Ultra-cut bedknife for maximum drag clearance.
- Flexible bedknife for all turfgrass surfaces, including bermuda, paspalum, bent and poa.

4BD250119

Ultra-cut bedknives

- JRM maximum drag clearance bedknife.
- The bottom-face angles are cut back to the screw hole.
- This helps minimize dragging on the golf course greens.
- Flexibility to cut as low as .090" with the bottom face angles shaved down. This is dependent on the condition of your cutting units, bed bar and reels.

4BD250109

Elite Super-thin bedknives

- The thinnest bedknife on the market cutting as low as .050".
- Not recommended for everyday use.
- Designed for the cleanest, lowest cut for big tournaments and events.
- Zero-degree deck height minimizes the capacity to grind these bedknives.
- Many customers hand face these bedknives to keep them polished and sharp.

4TPB22

Extended-cut bedknives

- Designed to position the cutting-edge further dead center on the reel allowing for a less-aggressive angle to the ground minimizing the chances of bruising, dragging and scuffing.

4BT250107

Socket Driver Tool

To complement its quality line of DURANIUM-801® Greensmower and Fairway bedknives, JRM, Inc. offers a bedknife screw tool to fit our Toro®, Jacobsen® and John Deere® screws.

- The Socket Driver Tool is specifically designed to fit the countersink on all JRM DURANIUM-801® bedknives.
- The JRM bedknife screw tools feature a superior design and stronger steel than its OEM Counterparts.
- The tight tolerances and superior design also eliminates the need for hammering and punching the screw.

Testimonials

JRM products have been great for us at Baltusrol Golf Club. Their bedknives are the best I've used in 33 years as a Turf Equipment Technician"

- Carmen Tino, Equipment Manager at Baltusrol GC in Springfield, NJ.

Matt Schnettler @DowsPlayGound · Jun 21

Just wanted to share this, so far after 27 tees (top dressed first) these JRM tines still have a point. Unbelievable, I would have had to change toros out 3 times by now.

#Sold! @JRMTurProducts

"When I needed a custom bedknife to solve a design flaw problem with a mower, JRM came through for me while the mower manufacturer let me down. JRM earned my loyalty and I've been a satisfied customer ever since."

Roland McPhearson, Almaden G&CC in San Jose, CA

"I have been an Equipment Manager for almost 30 years and have used JRM tines and bedknives nearly exclusively for the past 15 years. The quality of their products and customer service are the best in the business. I strive for perfection daily, and the dependability of JRM products allows me to focus on the machinery used to maintain our three golf courses without having to worry about some the most crucial parts that I order on a consistent basis."

Mike Elliott, Head Equipment Manager, The Union League of Philadelphia.

190S Turf @1908Turf · Jun 10

Busy and productive week for our team. Last core aeration on greens before the summer; 10 tines per block (5- 1/2" coring; 5- 1/4" solid) and 3" depth. Have to give a big 🙌 to @JRMTurProducts new Imperial Tip Infinity Dilemmium tines. Now all we need is some ☁️!

I use JRM exclusively for all my tines, reels, and bedknives. They are far more superior than the OEM's products that I've used in the past."

Brian Harper at Pendleton GC in Ruther Glen, VA.

"I've been using JRM Bedknives for over 18+ yrs. I used to be a stickler for OEMs when it came to cutting units with the exception of these bedknives. Definitely would recommend!"

- Hector Velazquez
Hector's Shop,
GSCAA Content Creator

"JRM bedkives are by far the best we've ever used. They are the truest and longest lasting bedknives on the market, which in turn saves us money and time. We run them on our greens, tees and fairways! The maximum drag clearance design has eliminated all drag issues even when we mow at low summer heights!"

Keith Beaudin at Country Club of Columbus in Columbus, GA

Quality Parts Meet Quality Care

JRM, Inc. makes the highest quality DURANIUM-801® bedknives and INFINITY® DURANIUM-24 reels. JRM has several products to complement these lines and keep the bedknives and reels sharper, longer.

VULCAN GRINDING WHEELZ

- The Cubic Boron Nitride grinding surface is the second hardest abrasive next to diamond. Perfectly suited for harder steels like bedknives.
- The CBN surface is known for its cool grinding characteristics eliminating any possible thermal damage.
- Vulcan Grinding Wheelz can cut an individual's grind time in half.

JRM DEBURRING STONE

- Hand stone designed to remove the burrs, high spots and dings from the bedbar and bedknife mating surfaces.
- A true bedbar equals less pre-grind work and backlapping on bedknives.

JRM REEL SHARP

- JRM Reel Sharp lapping compound is made with a virgin silicon carbide grit and pharmaceutical grade water soluble polymer known for maintaining its mixture.
- JRM offers 6 grits. The lower grit numbers (50, 80, 100) are designed for fairways, rough and tee box applications. The higher grits numbers (120, 180, 220) are used for greens.

JRM Cutting Edge Papers

- The papers are the perfect weight to test the sharpness of greensmower and fairway reels and bedknives.
- Recommendation: use one single strip to test the sharpness for greensmower setups; and fold the strip in half to double the paper thickness for fairway setups.

Reel Sharp Lapping Compound

Part No.	JRM Description	Size	Price
Reel-Sharp-50	50-grit premium lapping compound	30 lb. pail	\$135.67
Reel-Sharp-80	80-grit premium lapping compound	30 lb. pail	\$135.67
Reel-Sharp-100	100-grit premium lapping compound	30 lb. pail	\$135.67
Reel-Sharp-120	120-grit premium lapping compound	30 lb. pail	\$135.67
Reel-Sharp-180	180-grit premium lapping compound	30 lb. pail	\$135.67
Reel-Sharp-220	220-grit premium lapping compound	30 lb. pail	\$135.67
Reel-Sharp-80 2#	80-grit premium lapping compound	2 lb. pail	\$19
Reel-Sharp-120 2#	120-grit premium lapping compound	2 lb. pail	\$19

Recommended grit per application

Rough units – that are primarily ground driven and height of cut ranges from 1.25" to 2.25".

- Start with a 50 or 80 grit compound and lap until even.
- Repeat process for reels finishing with a 120 grit for smoothness.

Tees and Fairways units:

- Start by using an 80 or 120-grit compound, then follow up with a 180-grit compound to finish.
- Routine back lapping of these units is done every 2-3 weeks using 180 grit to maintain a sharp edge.

Greens units:

- Recommended to start with a 120-grit compound and finish with a 180 or 220-grit compound.
- Greens reels are typically lapped weekly to maintain a sharp cutting edge throughout the season.
- Courses that top dress regularly-a grit like 180 is recommended.
- A 220-grit is recommended for courses looking to polish up a knife for over the weekend use.
- Courses cutting below .110 during the busy season, 220-grit is recommended to maintain a sharp edge to avoid wearing out the thinner bedknives required for the lower heights of cut.

JRM Backlapping Machine

- Superior electric motor that does not overheat.
- Forward and reverse directional switch
- Quietest unit on the market
- 2 stands for height adjustment

Part #	Description	Price
7BLM100	Backlapping machine	\$703.80

Vulcan Grinding Wheelz and Deburring Stone

JRM Vulcan Grinding Wheelz

Vulcan Grinding Wheelz feature the premium performance of Cubic Boron Nitride (CBN), an advanced abrasive second only to diamond.

The **CBN grinding surface** is the second hardest abrasive, surpassed only by diamond.

This exceptional hardness makes it perfectly suited for difficult-to-grind materials, such as hardened steel bedknives.

- **50% Faster Grinding:** Dramatically cut your labor time.
- **Stays Cool:** Eliminates thermal damage to the bedknife.
- **Ultimate Performance:** Superior hardness ensures maximum material removal and quality finish.

NOTE: Please make sure you verify the depth on your grinding stones. The **Bernhard® Anglemaster 4000/4000DX** can take a deeper stone. The **9GW600135** has a 1" depth, and the **9GW600235** has a 2" depth.

Bedknife and Bedbar Deburring Stone

Achieving a clean, true bedknife surface with your deburring stone is the essential first step for any precision grinding job.

Part No.	JRM Description	Diam.	Thickness	Price
4BSTONE	2-sided deburring stone--thick rough/smooth finish side	4"	1.5"	\$55

4BSTONE

Optimizing Your Bedknife and Bedbar Surface

Follow these steps to ensure a flawless, ready-to-grind surface and maximum contact with your new bedknife:

- **Prep the Bedbar** - Thoroughly clean all excess dirt and debris from the bedbar surface using your preferred tool.
- **Lubricate** - Apply a liberal coating of WD-40® or similar lubricant to both the bedbar and the deburring stone.
- **Remove Imperfections** - Use the hand-held deburring stone to remove high spots and dings from the bedbar surface.
- **True the Mating Surface** - Stone the bedknife's mating surface to ensure the flattest, most precise surface possible.
- **The Result** - A true, optimized surface combined with a precision JRM DURANIUM-801® bedknife dramatically reduces pre-grind setup time.

JRM Cutting Edge Paper

Our specially weighted test paper is engineered with the perfect weight and thickness providing a reliable method for instantly verifying the quality of your grind.

Fairway Setup:

For the heavier demands of fairway equipment, fold the strip in half to double the thickness, providing the appropriate resistance for a proper sharpness test.

Greensmower Setup:

Use one single strip of paper to confirm the precise sharpness required for greensmower setups.

Part No.	Description	Size	Price
5CP250101	Pack of 5 Cutting Edge Papers	250 sheets	\$10

Why **GOLFCO**[®] INTERNATIONAL ?

- Competition Rollers are designed to fit all: Toro[®], Jacobsen[®], John Deere[®], Ventac[®], Ransomes[®], Baroness[®], True-Surface[®], Tru-Turf[®] greens rolling machines, SISIS[®] & many more.
- GOLFCO[®] offers unique roller designs to help minimize wash boarding, reel overlap, non-striping and non-shadowing lines.
- Grooved and smooth rollers promote consistent cut appearance.
- Polyurethane cast over heavy-duty steel tubing is more durable than standard metallic rollers.
- Polyurethane is extremely abrasion resistant and will help minimize debris accumulation.
- Shock absorbing- less fatigue on operator.
- Universal overhaul bearing kits easy and fast to rebuild.
- Will not cause damage to cart paths; vice-versa.
- Lasting durability from quality components.
- Lowest heat/cold conductivity from urethane body.
- Reduces transmigration of harmful bacteria/fungi.
- Quiet operation--reduces mower noise.
- Minimizes turf temperature stress.
- Over 90% of orders ship the same day.
- Trusted by top championship golf courses.

OREGON®

MOWER BLADES OFFER:

Superior Mulching

Superior Bagging

Superior Side Discharge

A longer-lasting cutting edge compared to OEMs on the market

OREGON® MOWER BLADES STYLE DIFFERENCES

OEM: Equivalent copy of OEM blade

G3: Gator blades feature superior side discharge & bagging and superior mulching

G5: same as G3 plus extended cutting length and infused carbide cutting surface

G6: same as G5 plus thicker & wider for superior longevity.

This is a partial list. More blades are available from the Oregon® catalog. Contact your salesman or the JRM Customer Service Department (888-576-7007)

MOWER BLADES

Offering:

- ✓ Superior Mulching
- ✓ Superior Bagging
- ✓ Superior Side Discharge
- ✓ A longer-lasting cutting edge compared to the OEMs on the market

Terms to Know

There are two critical measurements necessary to selecting the correct tine total length and mounting diameter.

Total Length is important, if you choose a tine that is too long you can cause a very big problem, plowing.

If the **mounting diameter** is incorrect, the tine will simply not fit in the machine's mounting bracket.

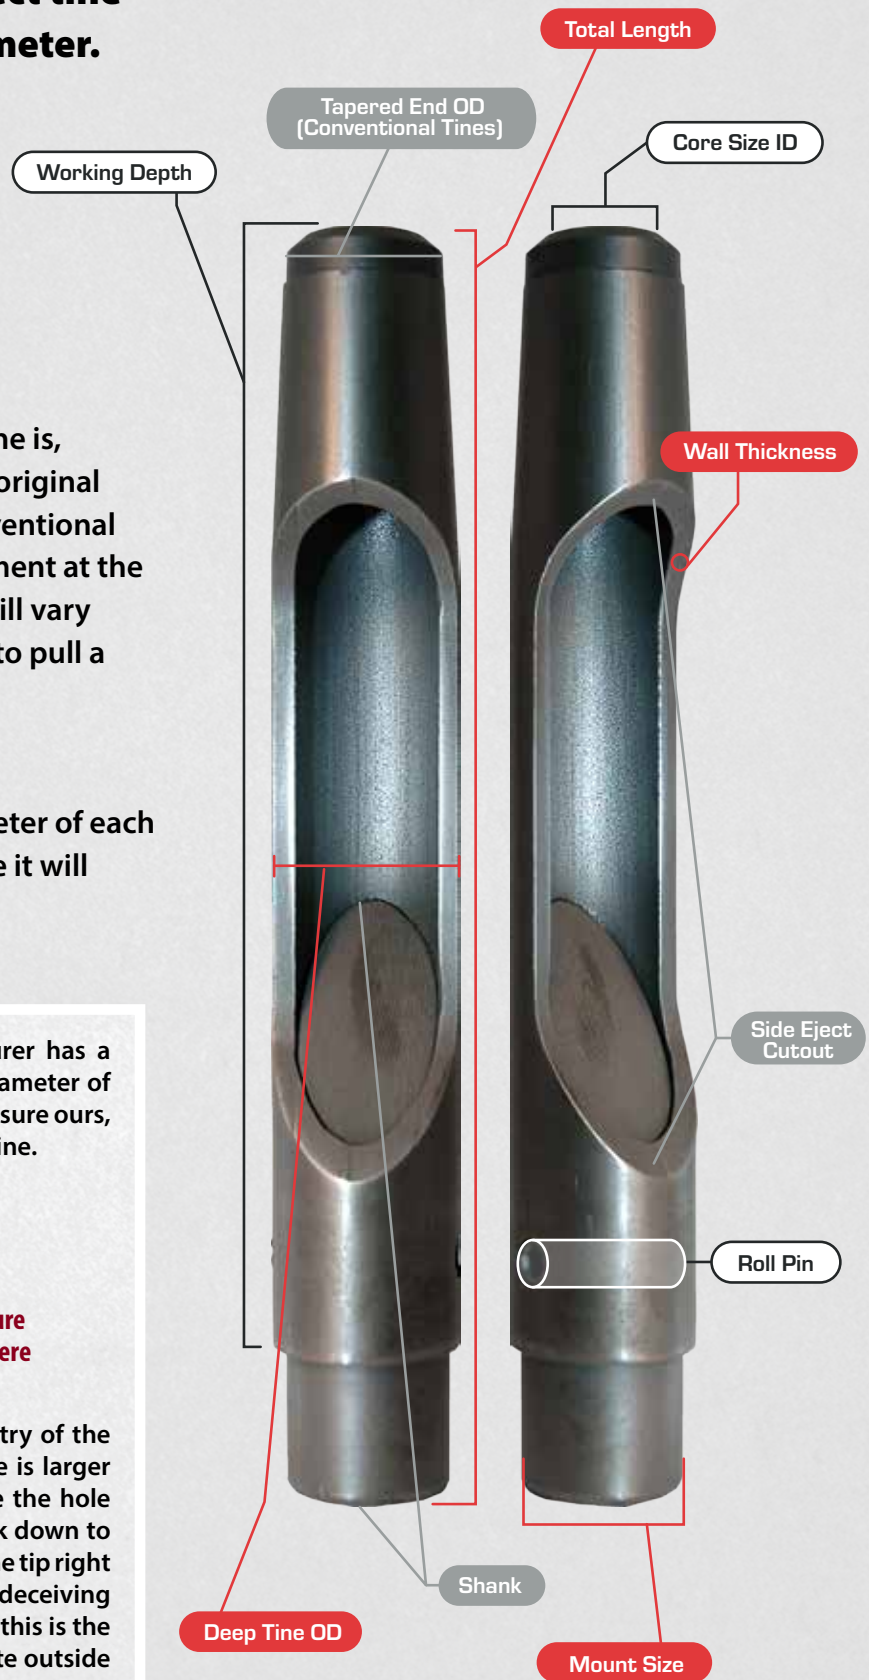

The **OD (outside diameter)** on a Deep Tine is, by tradition, the outside diameter of the original production stock (tubular steel). On Conventional Tines, the OD is considered the measurement at the tapered end. These two measurements will vary since all tines must have a taper in order to pull a core.

The **ID (inside diameter)** is the cutting measurement that will result in the diameter of each core. Carefully consider the tine's ID, since it will determine the diameter of each core.

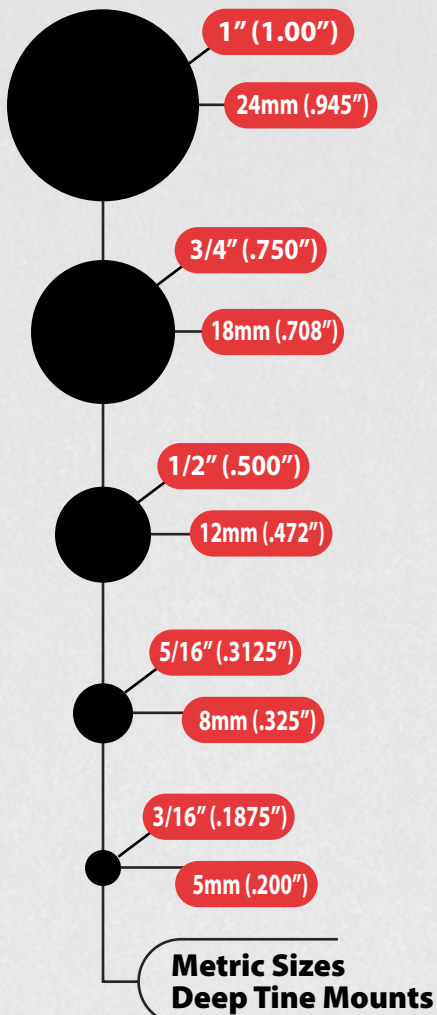

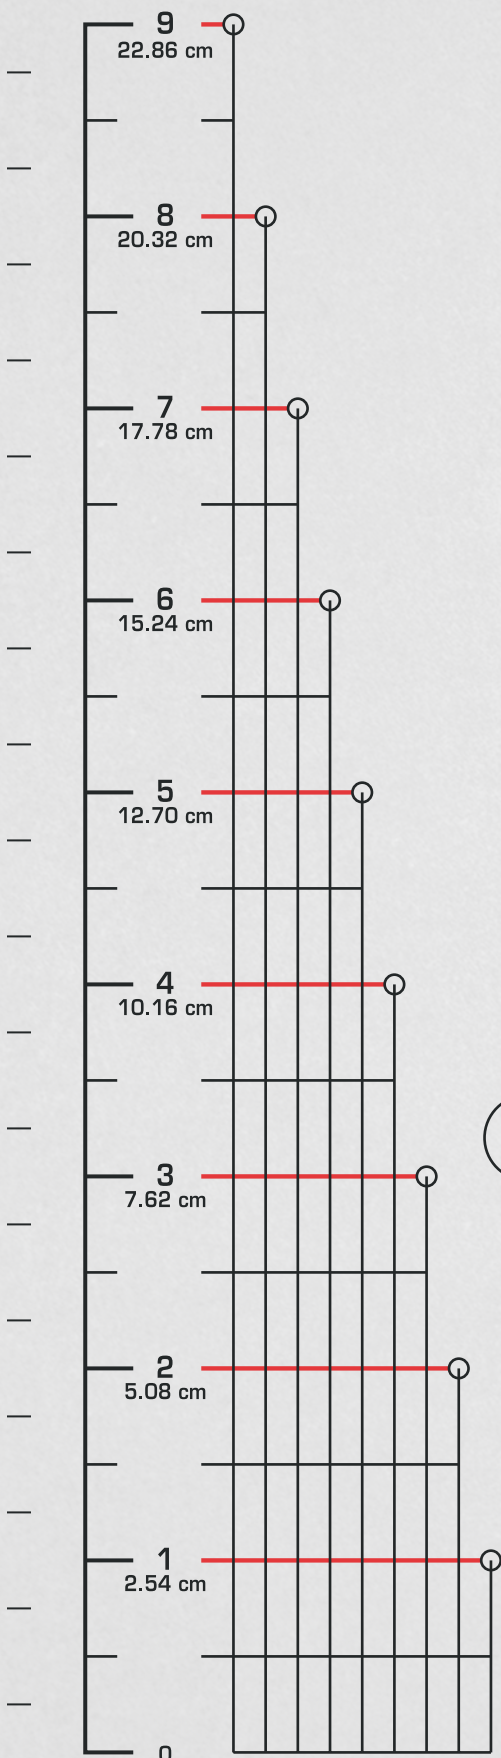

At JRM, we are aware that every manufacturer has a different method of measuring the outside diameter of its product. We just want to clarify how we measure ours, especially with our tapered ODs for our quad line.

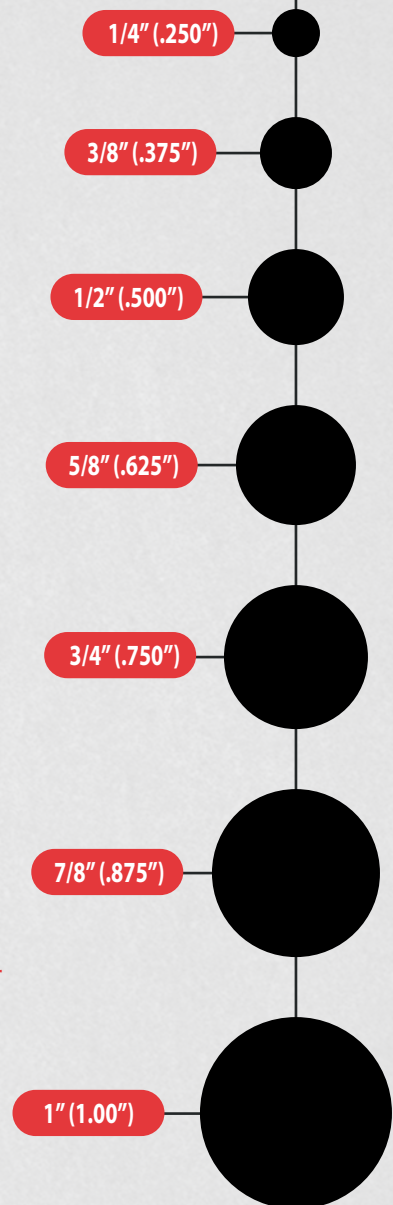

We determine our OD based on the initial entry of the tine into the soil. Although the OD of the tine is larger toward the mount, and that width may make the hole larger initially, the hole will always shrink back down to the size of initial entry. We measure our OD at the tip right after we cut the stock for the part. It may seem deceiving by looking at the part with the naked eye, but this is the way we've determined to get the most accurate outside diameter measurement.

MOUNTING DIAMETER OPTIONS FOR POPULAR MACHINES

** Please consult your machine manual before choosing a tine.*

Located below is a list of the most popular machines from Toro®, John Deere®, Ryan®, VERTI-DRAIN®, Soil Reliever®, and Wiedenmann®, and the corresponding mounting diameter options available for each machine.

The smaller mounts (1/2", 3/8") represent the Quad blocks used for our Quad line and solid/venting tines.

Please take note of the unique mounts for the Wiedenmann® machines as well.

The machines require the 8mm, 12mm dimple mount, or the 1:10 and 1:4 conical screw mount.

The mounting diameter of your machine, and the proper length of tine needed for your aerification are the two most important factors you should consider when selecting the correct tine.

LEARN ABOUT OUR TINE LINEUP

GET TO KNOW YOUR TINES

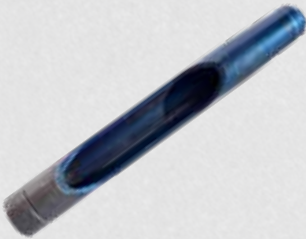

When deciding whether to purchase a DILLENNIUM® tine or a Premium tine one should consider the soil quality and makeup. Since a DILLENNIUM® tine will outlast a Premium tine by a factor of three or four, the choice should be clear. However, if you are likely to encounter excessive rocks or other foreign material you may wish to consider a Premium tine. A Premium tine simply offers less financial loss if a tine breaks but less overall value.

IMPERIAL TIP® INFINITY TINES®

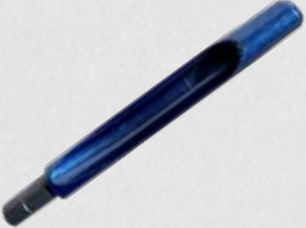

- JRM offers 9 aerification tines with the trademarked IMPERIAL TIP®.
- The IMPERIAL TIP® is designed to cut a cleaner hole and pull more material during aerification.
- JRM's best selling Emperor Tines™ feature the IMPERIAL TIP®.

DILLENNIUM® INFINITY TINES®

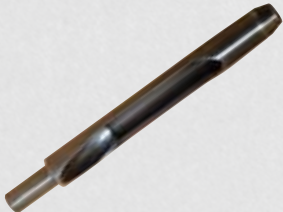

- DILLENNIUM® INFINITY TINES® features the highest alloy, highest-carbon steel on the market.
- INFINITY TINES® steel can be heat treated up to 40% harder compared to standard coring tine steel for increased longevity.
- INFINITY TINES® steel protects the body underneath the tip and the inside taper of the tine to pull cores longer.
- DILLENNIUM® is JRM's extra-strength composition of carbide on its tips.
- Longevity: up to 36 holes and more on USGA spec greens
- Consistent hole depth and length from holes 1 to 18.

Premium INFINITY TINES®

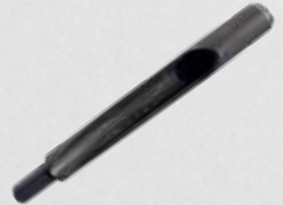

- Same design as the DILLENNIUM® without the carbide tip.
- INFINITY TINE® steel can be heat treated up to 40% harder compared to standard coring tine steel for increased longevity.
- INFINITY TINES® steel protects the body underneath the tip and the inside taper of the tine to pull cores longer.
- Longevity: up to 18 holes and more on USGA spec greens

DILLENNIUM® INFINITY TINES®

- DILLENNIUM® is JRM's extra-strength composition of carbide on its tips.
- DILLENNIUM® tip combined with standard 4140 steel.
- Tine will continue to pull cores until the body underneath the tip wears out.
- Longevity: up to 18 holes and more on USGA spec greens.
- Consistent hole depth and length from holes 1 to 18.

Premium INFINITY TINES®

- Made from standard 4140 steel with no tip.
- Longevity: 9-12 holes on USGA spec greens.
- Will lose length and diameter throughout aerification.

JRM INFINITY TINES®

The INFINITY TINE® blue line is engineered for durability and reduced replacement costs.

- **Ultimate Hardness:** Uses a hardened, high-carbon steel that's heat treated 40% stronger than standard steel without becoming brittle.
- **Solid Tines:** Lasts 2 to 3 times longer and maintains a consistent Outside Diameter and length from the first hole to the last.
- **Coring Tines:** Extended protection on the body ensures the tine continues to pull a quality core longer than any competitor.

JRM INFINITY® Emperor Tines™

Emperor Tine™ use specifications:

- Designed to remove the top layer of thatch and improve water filtration.
- Maximum depth is 1 to 1 1/2". If using a Toro® ProCore 648, typically setting C or D.
- Set Machine speed on the Toro® Procore 648 at 2.5 or 3.0. When set at 3.0, the tines enter the turf every 3 inches.
- The small plugs can be easily blown off with a backpack blower, then a quick roll, and the greens are back in playable condition.

BAYONET™ | CROSSTINES® | SUPERCROSS™ TINES

Benefits of a Bayonet™ Tine:

- Very minimal playability concerns and little effect on ball roll
- The hole can stay open 2-3 weeks for maximum oxygen exchange
- Very effective tool in heavy rain and extreme heat conditions
- Bayonets sever the roots leading to a thicker root mass
- Rotate tines 180 degrees every 6-9 holes for even wear
- 7" bayonets work perfectly on the Toro® ProCore 648. Set your depth and get extended use from the tine.

Shanks are available for all non-fixed shank Fairway Tines. Contact our Customer Service Department for the correct shank.
Roll Pins are available for all Fairway shanks. Contact our Customer Service Department for the correct roll pin.

DEEP TINES INFO

JRM DEEP TINES

All JRM deep tines are made from the finest steel available and to exacting standards. The DILLENNIUM® deep tine is an excellent option in many situations and can save you both time and money. A DILLENNIUM® tine should be chosen for ground that is aerified on a regular basis, or greens and fairways that have little or no rock. If one is likely to bend or break a large number of deep tines (greater than 30%), then the JRM Premium deep tine will be the better option.

Deep tines have many uses – Deep tine aeration is not restricted to the golf course. Many landscapers, service and/or sportsfields contractors employ the use of a deep tine aerifier. A 13/16" or 1" solid coring tine and/or a 1/2" or 3/4" solid deep tine is extremely popular on baseball and football fields as well as horse racing tracks.

Deep tine machines – JRM offers a full line of deep tine options for VERTIDRAIN®, Soil Reliever®, and Wiedenmann®. The different lines are broken down separately in the catalog. When choosing a Wiedenmann® tine, first determine whether you need a dimpled mount, or a screw mount. Our screw mounts are described as a 1:10 and 1:4 conical screw mount.

Metric sizing – Most deep tines have metric sizing for the shank diameter as all the deep tine manufacturers originate outside the United States. The two most popular shank options are the 12mm (.472"), considered a 1/2" equivalent, and the 18mm (.708"), considered a 3/4" equivalent.

Replacement tubes – To save money, a majority of our line features a removable shank and roll pin option. Once you order the full part and finish your initial aerification, you can pop out the roll pin, pull out the shank and order one of our replacement tubes. Roll pins come with every replacement tube.

VERTI-DRAIN® DEEP TINES

Verti-Drain® Deep Tines

Premium DILLENNIUM®

Fits VERTI-DRAIN® Only • Tines complete, includes shank, roll pin and tube

SOLID DEEP TINES

JRM's Newest Innovation in Turf Maintenance

JRM, Inc. has developed a solid deep tine that is proving extremely valuable in the field. In testing, these DILLENNIUM® tipped solid tines have lasted nearly 60 acres before switching them out--allowing you to aerify more than 18 holes of fairways and tees. The DILLENNIUM® tip will ensure a consistent hole depth throughout your aerification.

Rake Prongs

All of our Rake Prongs (also known as rake teeth) are designed specifically for the Toro® Sand Pro machine. The 9T375100 is a standard length rake prong (3.15"), and we also offer a shorter rake prong 9T375150 (2.65") for customers that have shallow liners in their sand traps.

JRM offers a circular rake prong (9T375500) designed to avoid catching the shallow liners in many sand traps. It also screws into the block, which allows you to control the depth of the rake prong when it enters the sand.

9T375500

VERTICAL-CUTTING BLADES INFO PAGE

Verti-cutting is part of a comprehensive approach that uses a specially designed machine to thin, dethatch, and aerate for improved health and appearance. Equipped with vertically oriented blades, verti-cutters create shallow openings for optimum aeration with adjustable blade height and spacing to accommodate grass type.

Removing Thatch

Thatch can prevent water, oxygen, and nutrients from reaching the grass, and can create an environment for pests and diseases. Verti-cutting removes thatch, allowing the grass to absorb more nutrients and water.

Improving Soil Conditions

Verti-cutting breaks up compacted soil, which can improve aeration and water infiltration.

Strengthening Root Systems

Verti-cutting promotes root growth, which helps the grass handle drought and foot traffic.

Encouraging New Growth

Verti-cutting cuts into the soil and promotes lateral spreading of grass runners, which can thicken your lawn.

Preparing for Overseeding

Verti-cutting creates shallow grooves that can help prepare your lawn for overseeding.

Giving Your Turf a Fresh Start

Verti-cutting can give your turf a fresh start before the growing season.

SHIPPING AND CONTACT INFO

Contacting JRM

At JRM, Inc., we take your opinions very seriously. Most of our new products and improvements to current products derive from customer opinions and feedback—good and bad. We encourage all customers, distributors and salesman to keep providing valuable feedback.

<i>By Mail</i>	<i>By Telephone/Fax</i>	<i>By E-mail</i>
Customer Service JRM, Inc. PO Box 1689 Welcome, NC 27374-1689	888-576-7007 toll free 336-354-1243 toll 336-764-8311 fax	sales@jrmonline.com

Ordering JRM Products

Authorized Dealer

Most areas throughout the world have authorized JRM distributors. You can find your distributor on the inside back cover of the catalog, or on JRM's website (www.jrmonline.com). You should contact your JRM Distributor for orders, invoicing questions and updates on existing orders.

Direct

You can JRM call JRM directly to place orders and to ask technical questions about any of our products.

Direct orders can be placed by:

Website: www.jrmonline.com
Email: sales@jrmonline.com
Fax: 336-764-8311

Telephone during regular business hours 7:30 am-5:30 pm EST
Toll free within the United States: 888-576-7007
World-wide via our direct sales line: 336-354-1243

When placing your order, please be sure to include all pertinent information such as your account number (if you have it available); ship-to address; bill-to address; name & contact number; quantity of items by part number. JRM can help you look up past orders and answer any other questions to help you select the correct part.

Domestic Shipping

- All JRM shipments can ship Fed-EX, UPS or other providers based on preference.
- JRM is a book today, ship today. All in stock orders placed before 4 p.m. EST will ship same day.
- JRM can expedite shipments (Next Day, 2-day, 3-day) upon request.
- JRM has relationships with several LTL providers for orders that ship by pallet.

International Orders

- All International orders ship according to customer request with the necessary customer instructions to clear customs.
- JRM has relationships with several International freight providers to find the best possible rates for your area.
- International customers can schedule their own freight pick-up

Payments

We accept major credit cards, Visa, Mastercard and American Express. For lines of credit and terms, please contact your JRM Distributor, or call JRM directly.

WARRANTY INFORMATION

JRM products are made of the very finest materials available and are warranted against any defect in manufacturing or materials. JRM DILLENNIUM® top-eject and side-eject coring tines used on conventional aerification machines having “Uniform wear” on golf course greens have a “use warranty” of a minimum of 18 greens or 130,000 Square Feet, whichever comes first. This revolutionary “use warranty” is only applicable for use on golf greens. The JRM warranty does not cover “chipping” which may occur if a large rock or cart-path is hit. “Uniform wear” means that the wear pattern is uniform on all sides of the tine indicating proper machine timing.

VERY IMPORTANT: ALL RETURNS FOR JRM INFINITY® REELS MUST BE RETURNED WITHIN 3 MONTHS OF PURCHASE, AND MUST BE RETURNED IN ORIGINAL PACKAGING, OR IT WILL VOID THE WARRANTY. WARRANTY CANNOT BE DETERMINED WITHOUT PHYSICAL INSPECTION.

ALL PRODUCTS MUST BE RECEIVED BY JRM WITHIN 90 DAYS OF ORIGINAL INVOICE DATE TO BE CONSIDERED FOR POSSIBLE REFUND.

HOW TO REQUEST A RETURN AUTHORIZATION:

- Contact JRM directly or contact your authorized JRM distributor to request a return authorization (RMA).
- Once an RMA is requested, JRM will email a Return Authorization. An RMA number will be included. Please write this number on the box you are returning for expedient processing.
- Customers are responsible for getting product(s) back to JRM for credit at your own expense.
- Call Tags and labels can only be issued for defective parts or JRM-related issues.
- All returned parts will be inspected to determine whether a credit will be issued. Some products are not eligible for return.
- All returns accompanied by a replacement order of equal value will not be charged a re-stocking fee.

RETURN AUTHORIZATION REQUESTS

Return To:

JRM, Inc. Return Goods Dept.
8491 N. NC Hwy. 150, Clemmons, NC 27012

A 15% RESTOCKING FEE WILL BE APPLIED TO ALL RETURN REQUESTS THAT ARE NOT ACCOMPANIED BY A REPLACEMENT ORDER OF EQUAL VALUE.

JRM reserves the right to refuse credit for any returned item (other than a warranty return) that is not in “like new” condition and available for immediate resale. All decisions by JRM are final.

Timing Problems

If an aerification machine is "out of timing" it will greatly reduce the use-life of your tines. A clear and inescapable indicator of both good and bad timing is the wear pattern on a used set of tines. Indeed, the age of a machine is no guarantee against timing problems since new machines are often delivered "out of timing". A well set up machine, in good timing, will produce a wear pattern that is 'even' all the way around the bottom of the tine. It is not required that a machine be in "perfect" timing for it to provide good and acceptable service. However, a machine that is badly out of timing will wear tines significantly faster and increase the cost of aerification. With the advent of the JRM DILLENNIUM® tines, this "wear pattern" has become much more evident since the tines will last significantly longer.

Timing Problems

FIG. #1 is a clear exception to the JRM Warranty. This tine was used on an aerification machine with a severe timing problem. No credit would be given for this tine.
